

# Carbon Neutral Plan 2030/50

Nowadays, problems derived from climate change, water scarcity and biodiversity are increasingly relevant. At GRI Renewable Industries, we aim to meet the demands of the current market and stakeholders, especially those coming from our main customers.

The analysis of the environment and the requirements of customers and companies in the sector show a roadmap with a final objective "to be carbon neutral" in the period 2030-2050.

For **GRI Renewable Industries** GRI Renewable Industries, being a carbon neutral company implies being part of an important commitment in the fight against climate change, assuming a series of actions that promote and contribute to mitigate its impact. For this reason, we defined and approved the "2030/50 Carbon Neutral Plan" and incorporated it into the company's decision-making, business strategy, management and performance.

It is necessary to balance different actions to reduce and offset those emissions that we cannot eliminate in order to achieve the "Carbon Neutral" objective. The main targets are summarized below:

## Goals 2030

- **Scope 1:** Reduce CO<sub>2</sub> emissions from fossil fuels by 50%.
- **Scope 2:** Use 100% renewable electricity in our own operations.
- **Scope 3:** Commit to have information and data available in all applicable categories.
- **Supply Chain:** Set targets for the reduction of indirect CO<sub>2</sub> emissions from suppliers.
- **Product:** Reporting on the impact of GRI designed towers.
- Certify reductions achieved (own and in the supply chain) according to **Science Based Targets** - SBTi.
- Communicate results according to the **Carbon Disclosure Project** - CdP.

## Goals 2050

To be carbon neutral in Scope 1&2&3.

This project should not be seen as an isolated initiative. In fact, it is integrated into sustainability efforts transversally. For its monitoring and measurement, it's been created a "**Carbon Neutral Government**", formed by a **Carbon Neutral Committee** and an **Operational Team**, with various professionals representing the different areas of the company with responsibility in this project. The committee meets on a monthly basis.

In 2021 we highlight the following initiatives:

**SCIENCE  
BASED  
TARGETS**

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

GRI Renewable Industries signed on July 1, its commitment to the **Science Based Targets (SBTi)** initiative.

DRIVING SUSTAINABLE ECONOMIES

Communication through the **Carbon Disclosure Project**.
